

Kid Mat

Car seat protector

Red dashed lines indicate intended cutting points

A

Ears for retaining and catching dirt

B

Protection against dirty feet

C

Protect your car seats from damage caused by child seats and dirt

INSTRUCTIONS FOR USE:

1. Place the Kidmat in the central position of the seat. If it doesn't fit well, especially around the areas where the child seat or seat belt attaches, you can trim it.
2. All the lines with edges inside the Kidmat are suitable for cutting. In the picture, they are marked by dashed red lines. Take scissors or a sharp knife and cut the Kidmat to your desired shape.
3. Kidmat is made from special anti-slip rubber, so it doesn't need to be fastened to the seat to stay in place.

TIPS FOR SHAPING AND USE:

- Cut along the outer edge so that the edge remains, as it is designed to hold dirt and liquids.
- For best use, leave as much of the "ears" as possible for dirt retention, as they are designed to catch dirt.
- Do not cut the protection area for dirty feet, as it helps keep the seat clean even around the feet.
 - You can clean the Kidmat most effectively with Gledring's Eco Dry Cleaner.
